

dimensions 48 x 24 x 48mm

pulse counter  
elapsed-time counter

- ✓ triggering 0 to 260V AC/DC (depending on the version)
- ✓ electric reset
- ✓ front panel reset can be disabled
- ✓ suppression of predecimal places
- ✓ LCD-display

pulse counter

- ✓ frequency of count up to 12kHz
- ✓ display range -9999999 ... 99999999

elapsed-time counter

- ✓ elapsed hour counter
- ✓ time recording in hours, minutes, seconds or 1/10 seconds

**backlight  
complete with mounting frame**

#### description

Counters in this series are suited to simple counting tasks. Installation is very simple as a consequence of the compact dimensions and the help that the supplied mounting frame provides.

The voltage supply takes place by means of an internal lithium battery. The counter itself is controlled through voltage impulses or a potential-free contact. You can reset the device via another potential-free contact or the button on the front side. This can be electrically locked against unauthorized use. As an option, the devices can be equipped with background illumination. The electric connections are made via screw terminals.

The impulse counters have an 8-digit LCD display. With the aid of an electric contact, it is possible to select between

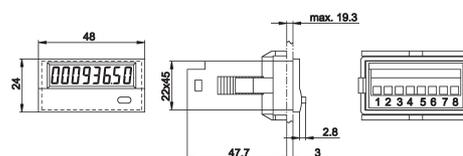

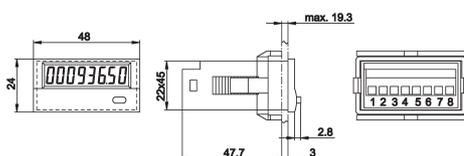

counting up and counting down. The maximum frequency of the count is 30Hz. When using the pnp counter input with the **CI090100** and/or **CI090110**, also faster processes up to 12kHz can be evaluated.

The time counters are preferentially used as elapsed-operating hours counters. You can choose between two display options: Seconds and/or hours as a decimal number or a breakdown into hours, minutes and seconds. Two time ranges are available.

#### application examples

- ▶ simple counting tasks
- ▶ elapsed hour counters
